No., Jl. Sukapura No.31, Sukapura, Kec. Dayeuhkolot, Kabupaten Bandung, Jawa Barat 40267

Certified System Analyst and Full-Stack Developer with comprehensive experience in designing, developing, testing, and optimizing scalable web-based systems. Skilled in end-to-end application development using Laravel, React.js, PHP, and MySQL, with a strong focus on system architecture, API integration, and database security. Experienced in building Smart Farming and IoT solutions integrating microcontrollers with AI-assisted (LLM/RAG) decision support platforms. Passionate about creating efficient digital solutions that deliver real-world impact and seamless user experiences.

Work Experiences

Asisten Generatif Agrikultur (AGA) - Bandung, Indonesia <i>Full stack Developer (Thesis Project / Tugas Akhir)</i> AGA is an AI-powered smart farming web application developed for thesis research, focusing on multi-land management, logbooks, and AI recommendations. - Independently designed and developed a full-stack Smart Farming web platform using Laravel, React.js, Tailwind CSS, and MySQL. - Implemented multi-land management features, daily activity logbooks, and real-time environmental data monitoring workflows. - Integrated Large Language Model (LLM) and Retrieval-Augmented Generation (RAG) to provide AI-assisted agricultural recommendations based on land conditions and thesis reference documents. - Designed and optimized MySQL database schemas, RESTful API endpoints, and server-side business logic for seamless system interactions.	Jan 2026 - Aug 2026
AgriNova Solutions - Bandung, Indonesia <i>Full stack Developer (Independent Project)</i> An emerging agritech startup focused on combining automated IoT sensors with intelligent software solutions for modern farming. - Engineered the front-end architecture for a smart farming web application, ensuring a seamless user experience for monitoring agricultural data. - Successfully integrated automated environmental sensor data (via ESP32 microcontrollers) into real-time, interactive web dashboards. - Implemented and connected Large Language Model (LLM) recommendation interfaces to provide actionable farming insights based on sensor data. - Collaborated within a cross-functional team to establish reliable system architectures and efficient data communication protocols.	Dec 2025 - Mar 2026
PT Trigobalindo Id - Bekasi, Indonesia <i>Full stack Developer</i> A trusted contractor and supplier delivering high-quality projects, requiring a modern and responsive digital presence to showcase their services. - Designed, developed, and deployed a responsive corporate profile website from scratch to strengthen the client's digital presence as a trusted contractor. - Translated business requirements into an interactive and scalable user interface. - Managed the end-to-end development lifecycle, including structuring project briefs, milestone planning, and successful final deployment.	Aug 2025 - Oct 2025
Transtrack.id - Bandung, Indonesia <i>Quality Assurance (QA)</i> A technology company specializing in fleet telematics and supply chain integrator solutions. - Conducted comprehensive manual and automated testing for web applications to ensure optimal performance, system stability, and seamless user experience. - Identified, documented, and tracked bugs or system defects to resolution before production releases. - Collaborated closely with the development team to improve code quality, UI/UX consistency, and overall product reliability. - Applied strong attention to detail from a QA perspective to establish robust front-end development practices.	Jul 2024 - Aug 2025

Education Level

Universitas Telkom - Bandung <i>Diploma in Information Systems, 3.60/4.00</i> Cumlaude	Aug 2021 - Aug 2024
Universitas Telkom - Bandung <i>Bachelor of Information Systems, 3.50/4.00</i>	Aug 2024 - Aug 2026

Skills, Achievements & Other Experience

Technical Experience

- Applied Service Layer and Dependency Injection patterns in Laravel to separate business logic from controllers and improve maintainability.
- Developed RESTful APIs for IoT microcontrollers (ESP32) to process sensor payloads (soil moisture, pH, temperature) and store readings in MySQL.
- Developed Laravel API integration with Large Language Models (LLM) and Retrieval-Augmented Generation (RAG) for context-aware agricultural recommendations.
- Developed responsive web interfaces using React.js, Tailwind CSS, Alpine.js, and Laravel Blade to deliver functional and user-friendly web experiences.
- Performed database performance troubleshooting and query optimization across MySQL, PostgreSQL, and MongoDB.
- Configured containerized development environments using Docker and Docker Compose for database setup and local microservices.

Certified System Analyst

(2025)

- Officially certified by the Indonesian National Professional Certification Agency (BNSP) as a System Analyst. Validated competencies in analyzing system requirements, designing robust IT architectures, and aligning complex business needs with scalable technical solutions to ensure high-quality software development.

Hard Skills

- Backend: PHP, Laravel, Node.js, Express.js, Python
- Frontend: JavaScript, React.js, Alpine.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Blade
- Database: MySQL, PostgreSQL, MongoDB, Redis
- API & Integration: RESTful API, IoT Integration, Sensor Payload Processing
- AI & Emerging Technology: Large Language Model (LLM), Retrieval-Augmented Generation (RAG), AI Integration, IoT, ESP32
- Tools & Development: Git, Docker, Docker Compose, Postman, Visual Paradigm

Soft Skills

- Adaptability, Teamwork, Communication, Problem Solving, Attention to Detail, Time Management
